

Environmental Policy

We are deeply committed to environmental stewardship, focusing on minimising pollution, reducing waste, and optimising fossil fuel usage to continually improve our ecological performance. We strive to reduce the environmental impact of our business activities by maintaining a safe workplace, conserving natural resources through recycling and reuse, promoting 'Green Procurement', and developing environmentally friendly products. Our operations are designed to prevent pollution, minimise waste, and manage disposal responsibly. We prioritise renewable energy, aiming to exceed both governmental and voluntary environmental standards worldwide. As a responsible global corporate citizen, environmental care is integral to our business strategy, and all employees and contractors are expected to uphold this policy, demonstrating a firm commitment to sustainability.
